ERP Payment Recon from EPI-USE

EPI·USE®

Accept digital payments with real-time reconciliation and fraud detection

ERP Payment Recon from EPI-USE is an innovative solution that lets SAP customers accept digital payments with real-time reconciliation in SAP using the AWS SDK for SAP ABAP.

Whether your customers are paying by card, ACH transfer, or with a digital wallet like Apple Pay or Masterpass, ERP Payment Recon empowers you to detect fraud through Amazon Fraud Detector and set up automated controls between transaction processing and your core accounting for a seamless and secure experience.

Digital payment acceptance is complex

Customers now have more ways to pay than ever. While that's a good thing, it does complicate transaction reconciliation in SAP, often resulting in several contracts with payment service providers (PSPs) in addition to challenges for reconciliation with finance and maintaining compliance. This way of accepting digital payments is highly manual, scattered, and doesn't scale across the enterprise, creating headaches for finance and accounting departments and exposing the organization to potential fraud risks.

ERP Payment Recon offers a better way

ERP Payment Recon from EPI-USE provides an integrated solution that works across departments and multiple lines of business, with referencing tailored for SAP Finance both in the cloud and on-premises. Here are some of the reasons why organizations choose ERP Payment Recon over legacy solutions:

- Supports payment by card, ACH, and digital wallets such as Apple Pay, Amazon Pay, Visa Checkout, and Masterpass
- Provides real-time transaction reconciliation with SAP
- Connects accounts receivable and accounts payable to Amazon Fraud Detector for faster and more accurate fraud detection
- Incorporates a number of AWS services, including AWS SDK for SAP ABAP, AWS, Amazon SQS, Amazon EKS, Amazon Web Application Firewall (WAF), Secrets Manager, Guard Duty, and more
- Gives organizations more automated control, visibility and traceability of transaction data. Reducing manual processes and facilitating enhanced customer support

Use cases
Here are some of the ways ERP Payment Recon can help your organization simplify digital payments:

For higher education. Whether through SaaS applications or SAP, student-facing applications for accepting payment can vary across departments and digital touchpoints. ERP Payment Recon integrates with these SaaS and ERP tools for combined financial reporting across all payment endpoints and real-time reconciliation with SAP.
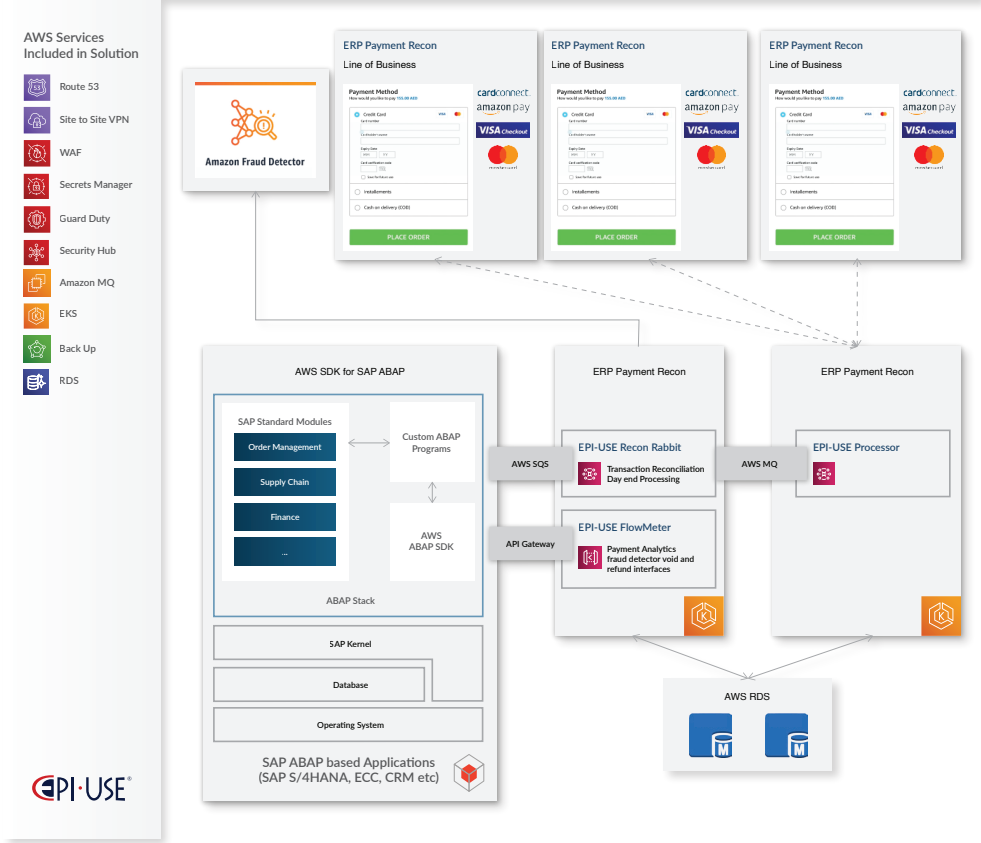

For healthcare providers. Hospitals and clinics accept digital payments from patients for services like consultation fees, pharmaceuticals and medical supplies, parking, and admission deposits. ERP Payment Recon helps healthcare professionals provide timelyand critical care while reconciling payment transactions to SAP in real-time.

For local governments. Sanitation services, water, sewage, property tax collection—local governments accept payments from residents in a number of ways and for a variety of services. ERP Payment Recon from EPI-USE brings these transactions together for combined financial reporting and real-time reconciliation with SAP.
