

Supply Source online:
Upscaling productivity

About Supply Source online

Supply Source has sought to provide the highest quality janitorial and food service products combined with outstanding customer service and satisfaction in the Atlanta Metro area. They serve customers in many different sectors, including restaurants and caterers, churches, assisted living and nursing homes, office environments, janitorial cleaning contractors, auto dealerships, and manufacturing and industrial facilities.

**SUPPLY
SOURCE**

Supply Source distributes products from well over 200 manufacturers, giving their customers a wide selection of janitorial chemicals and supplies, food service disposables and small wares, away-from-home towel, tissue, and soap products, and industrial safety supplies.

The Challenge

In handling large numbers of orders, it can become difficult for members of the Supply Source team to expand their workflow to one another. Supply Source needed a modern solution to grow their productivity effectively within their organization. This included having access to powerful computing resources at a low cost. These resources needed an aspect of agility that could constantly expand their computing facilities within their organization, while also helping them add new features to their online ordering system.

The Solution

Windows on EC2 allowed Supply Source to replicate and expand their infrastructure easily. EPI-USE Services for AWS and their team was able to add new functionality and efficiency to their existing applications. The use of AWS Systems Manager keeps Supply Source's environment up to date, and minimizes points of failure without human interaction. This also contributes to the maintenance of their environment, helping EPI-USE AWS maintain the 'Golden AMI', keeping relevant and redundant backups of the Supply Source environment ready to be deployed at any time if necessary.

The power of AWS supported a higher level of business agility, where Supply Source was able to increase their productivity with expansive compute power.

About EPI-USE Services for AWS

EPI-USE Services for AWS offers robust and scalable hosting solutions, based on AWS. As a Next-Gen Managed Services Provider (MSP) we provide managed services and consulting services for AWS, including assessment, development, migration, management, and optimization, allowing our clients to focus on their core business. By providing a flexible cloud migration methodology, we tailor our migrations to each client's unique requirements. This allows any business to move from traditional server environments to AWS quickly and efficiently, with little to no impact on existing environments.
