

SAP transformation to Microsoft Azure for leading financial services organization

A seamless SAP migration to Microsoft Azure and ongoing Managed Services for one of South Africa's largest financial services groups.

Group CIO Corporate Functions, Leading financial services organization

Re-platforming 120 servers into Microsoft Azure

Affecting operations in 32 countries worldwide

Over 50,000 employees

## A leading African banking and financial services organization

Our client is a major South African-headquartered Banking and Financial Services business. Operating across 20 countries in Africa with over 50,000 employees worldwide, the organization was founded almost 160 years ago.

# The complexities of transforming to SAP HCM as a Service

This financial institution has been an EPI-USE Labs' client for many years, and the two businesses have built a strong and trusting relationship. When the bank was faced with the complex task of future-proofing and modernising their SAP HCM business, they knew they could rely on advice from EPI-USE Labs. In light of the bank's selected strategy to migrate to Microsoft Azure, challenges included:

- right-sizing the footprint accurately in Microsoft Azure
- understanding the detail of the bank's infrastructure (the organisation has grown significantly, and has numerous teams)
- the bank's high level of governance and security
- migrating to a hyperscaler with technology that was new and unfamiliar to the bank
- optimising costs and modernising the landscape
- maintaining data integrity and security.

### An accelerated SAP migration

EPI-USE Labs provided our client with Software as a Service (SaaS). Subject matter experts in both SAP® migrations and Azure cloud architecture moved the bank's SAP HCM landscape to Microsoft Azure (suite on HANA) successfully. They started with the ECC system, upgrading the bank from enhancement phase 5 to 6, then 8, and performed a Unicode conversion, mainly in the HC space. The specialists used the accelerated SAP migration method, trimming down the landscape, refreshing it and completing the migration securely.

The team designed the landing zone in Azure from the ground up, which required a detailed knowledge of Azure, and integration and security to meet the Bank's requirements. This project took ten months and involved migrating 120 servers in total, reduced to 81 in Azure.

### Excellent return on investment

EPI-USE Labs provided Standard Bank with Software as a Service (SaaS). Subject matter experts in both SAP® migrations and Azure cloud architecture moved the bank's SAP HCM landscape to Microsoft Azure (suite on HANA) successfully. They started with the ECC system, upgrading the bank from enhancement phase 5 to 6, then 8, and performed a Unicode conversion, mainly in the HC space. The specialists used the accelerated SAP migration method, trimming down the landscape, refreshing it and completing the migration securely.

The team designed the landing zone in Azure from the ground up, demanding a detailed knowledge of Azure, and integration and security to meet Standard Bank's requirements. This project took ten months and involved migrating 120 servers in total, reduced to 81 in Azure.

We are beyond proud and look forward to many more successes as we pivot our organisation along its transformation journey.
